Introduction

Step is a revolutionary fitness application that lets you earn cryptocurrency while you walk and get healthy. Walking as it is, is one of the regular activities which is performed whether it's in the house or outside.

Keeping this in mind, we have come up with a unique concept where you can get strong both physically and financially.

Step strives to urge the users to follow a healthier lifestyle, lessening global warming, develop financial independence, and boost self-confidence. All this with few easy steps and less hustle.

Users can download the app from the play store or app store, enter their wallet address (BEP-20) and they are good to go.

Vision

We at **Step** wanted to develop something which would be class apart from the competition which would allow users to get more fit and healthy and get wealthier while doing so.

We checked the competition and saw users are only been given some products or coupons to said products as a reward but we at **Step** firmly believe in crypto and so we decided to develop an app which will give our end users a financial incentive for just walking.

This should give a reason for the users to walk more often and use less vehicles which will reduce the carbon foot print. Unlike other apps we believe in privacy and anonymity so our app is focused purely on that.

Also, with our **Step** app which doesn't use any fiat or product-based rewards instead we give rewards in crypto which will make many non-crypto users use cryptocurrency as a standard.

Background

Since the rise of cryptocurrency in 2009 there have been no application built on cryptocurrency on any blockchain which would purely give rewards as cryptocurrency without any KYC or user data just purely with wallet address which is how a cryptocurrency or blockchain focused app should be.

When we do this, we eliminate any possible leaks of user data, any misuse of user data or user data used for marketing. We wanted to give our users a complete secure and privacy focused app which will just pass the user internal score and wallet address and nothing else. Our users can get up to 0.1 BNB a day just by walking.

Users must own a minimum of 22K **Step** tokens or STEP NFT in their wallet to be eligible for rewards. 5% buy tax 15% sell tax will be applied. This is to make sure that no price manipulation can be done by any pump and dump groups on our **Step** token

Crypto

A cryptocurrency, cryptocurrency, Crypto is a digital currency designed to work as a medium of exchange through a computer network that is not reliant on any central authority, such as a government or bank, to uphold or maintain it.

Blockchain

Blockchain is a shared, decentralised, distributed immutable ledger that facilitates the process of recording transactions and tracking assets in a business network

Binance Chain

Binance Chain allows
users to develop
decentralised applications
on top of the chain. It is
a decentralised and
transparent blockchain
and also offers low trading
fees. That is why we are
built on top of Binance
Smart Chain.

BEP20

BEP20 is a Binance token standard which allows users to deploy fungible tokens or cryptocurrencies on BSC. More specifically, leading crypto assets on other chains can be transferred to the Binance smart chain in the form of pegged BEP20 tokens.

NFT

A non-fungible token is a non-interchangeable unit of data stored on a blockchain, a form of digital ledger, that can be sold and traded on the blockchain.

Wallet address

A wallet address is a sequence of numbers and letters, with no spaces nor symbols. Each wallet address is unique and there is no other wallet address like it. It is the unique identifier for your account on the blockchain.

Metamask

MetaMask is a software cryptocurrency wallet used to interact with the Ethereum blockchain. It allows users to access their Ethereum wallet through a browser extension or mobile app, which can then be used to interact with decentralised applications.

Disperse.app

Disperse allows you to pay multiple contributors in one transaction with low gas fees. The interface is super simple and available at no additional cost. That's why we use disperse to distribute rewards to users quickly and efficiently.

KYC

The know your customer or know your client guidelines in financial services require that professionals make an effort to verify the identity, suitability, and risks involved with maintaining a business relationship.

Block

Groups of data within a blockchain. On cryptocurrency blockchains, blocks are made up of transaction records as users buy or sell coins. Each block can hold only a certain amount of information. Once it reaches that limit, a new block is formed to continue the chain.

Cold Wallet

A secure method of storing your cryptocurrency completely offline. Many cold wallets (also called hardware wallets) are physical devices that look similar to a USB drive. This kind of wallet can help protect your crypto from hacking and theft, though it also comes with its own risks – like losing it, along with your crypto.

Exchange

A cryptocurrency exchange is a digital marketplace where you can buy and sell cryptocurrency.

Private Key

The encrypted code that allows direct access to your cryptocurrency. Like your bank account password, you should never share your private key.

Staking

Staking offers crypto
holders a way of putting
their digital assets to work
and earning passive income
without needing to sell
them.

Staking pool

A staking pool is a group of coin holders merging their resources to increase their chances of validating blocks and receiving rewards. They combine their staking power and share the rewards proportionally to their contributions to the pool.

Supply

Step has a max supply of 1 billion **Step** tokens with variable burn rate in which 60,500,000 STEP tokens were used for Pre-sale and 55,000,000 **STEP** tokens used for liquidity. 5% of the tokens will be released to team each cycle (21 days).

Privacy & Security

In this modern day and age where privacy is a myth, we come up with a solution where complete focus is given to user privacy and see to it that there is no misuse, overuse, and abuse of user data.

We at **Step team** respect users' privacy and security and with our no KYC rule allows user to easily use the app without any hassle of data being leaked.

We use Android built in accelerometer and Google Fit data which includes calculating steps and distance on the phone and if the user uses a smart watch, we also track calories and average heart beat which is then used by Google Fit app and we calculate a internal score which we then pass along to the server to distribute rewards.

On Apple devices we use Apple Health which in turns uses the phones built-in accelerometer to track steps and distance on the phone and if the user uses a smart watch, we also track calories and average heart beat which is then used by Apple Health and we calculate a internal score which is then passed along to the server same as Android.

We never take any other data of the users or will ask any other permissions apart from the ones to track above health data.

We Believe in crypto and anonymity that all users have the right to their data and we for one don't accumulate any data of our users. And the rewards which is being sent to the users are also with just their wallet address and nothing else. Unlike fiat currency Step uses the Binance Smart Chain network to safely give users funds which they can sell and exchange for other tokens or just cash it out.

While we respect users' privacy, we do have various anti cheat measures in place just to make sure that no malicious user can get more rewards or use the app/reward in unauthorized way.

Staking

Our users have staked over 3 million dollars' worth of tokens.

Users can go to https://stake.walkwithstep.io to stake Step tokens. Users are rewarded 14.25 Step tokens per block. With our generous interest rate which varies on how many users are there and how much they own in the pool.

With Step staking all holders will have a chance to stake their tokens which means users can earn passive income from staking their Step tokens which is in addition to the rewards they get for using the app and just walking.

Users can withdraw the staked Step coins anytime and there is no lock in period but if the users opt to withdraw within 72 hours, they would have to pay a fee of one percent and after that there is a small fee of 5% on profits only.

There are both options for manual and auto compounding to get you the best APY out of your staking.

Tokenomics

TAX DISTRIBUTION

TAX
Buy - 5%
Sell - 15%

Total Supply

1 billion STEP

Rewards eligibility

- At least 4000 daily steps
- At least 22.000 Step tokens in wallet
 OR STEP NFT in wallet

Rewards are calculated on the steps % quota among all eligible holders (minimum of 4000 daily steps) A multiplier is then applied depending on how much tokens are held by each user.

Use Case

This can be used by anyone who has a smartphone (which almost everyone has now a days). It doesn't require any additional work and people who walk day to day will be rewarded and it will not only benefit them monetarily but also physical fitness. That's our goal at **Step**.

Such simple use case with low weight application and simple to use application which will sync node automatically and you can manually sync it too with the sync button.

Once the users install it and get rewards which one can cash out should motivate them to walk more and get in shape. Anyone can use this app from kids to adults to old people so that they stay active and fit.

Unlike other apps we don't have a sign up or login page just install the app give the necessary permissions and enter the wallet address where you want the rewards and are good to go.

Due to covid people are staying indoors they too will get a reason to walk to earn extra income and by staking it they can get more passive income. All to get them healthy and wealthy.

Step app makes fitness fun and rewarding. And unlike a gym membership which many buy at the beginning of the year but then slowly stop going to it because they don't see any rewards in doing so and get lazy. This gives you rewards daily so that the brain gets its dopamine and you keep walking more and more to earn more rewards.

With rewards as high as 0.1 BNB a day just for walking can motivate anyone to get out of the bed and get fit. That's the purpose of the app get you healthier and get you extra income by walking.

Theoretically if you earn 0.1 BNB a day that's 3 BNB a month which you get just by walking and getting yourself healthier, which is in fact a great way to shape your life.

Conclusion

We have presented a new idea of rewards cause of which we are having a fast-growing user base who loved the idea and are joining day in and day out which is proving that we the team at **Step** are on the right track.

We provide a safe and seamless app which users can use with ease of mind and every day and get crypto reward every day. Moving forward we are also going to introduce new things like our NFT collection, metaverse and more.

Our team at **Step** will keep on making new innovations and ideas so that it will help our users more and more. So, let's get healthier and wealthier together download the **Step** app now.
